

AQA GCSE Physics Paper 1 Foundation

Teacher Notes

This assessment pack includes an AQA style exam including content from topics 1 – 4 of the AQA Physics specification and the accompanying mark scheme. This paper includes low and standard demand questions suitable for foundation tier students. This could be used as a mock exam with your students.

The pack also includes two evaluation sheets that students could use to identify their weaker areas. You may choose to use the one most useful to your students. One version of the evaluation sheet includes the topics covered by each question, while the second version groups the question part based on the skills needed to answer them. Students can rank their progress as red, amber or green and use this to inform their next steps for revision.
