around the world.

- 1.2 Land's End to John o'Groats.
- The John o'Groats challenge is a route from John o'Groats, at the far northeast corner of Scotland, to Land's End, the far south-western point of Cornwall, a distance of 1407 kms. Many people walk, cycle or run the route in aid of charity.
- The route from John o'Groats to Land's End is a great way to see the many varied landscapes and environments of the UK.
- 1.3 The UK in Europe.
- The UK is part of Europe.
- Many of the countries in Europe belong to the European Union. These countries have close economic, scientific and cultural links with one another.
- Following a referendum in 2016, the UK voted to

1951.

- 2.2 Landscape processes.
- The UK has many different types of rock. The geology of the UK explains its varied landscape of mountains, valleys and lowlands.
- The rock cycle explains the processes by which rocks are constantly being changed from one type into another.
- The physical landscape is created by the processes of weathering, erosion, transportation and deposition.
- Weathering is the first process in the breakdown of rocks. Rock fragments are then eroded, transported and deposited in rivers or in the sea.
- 2.3 River landscapes.
- A drainage basin is the area of land drained by a river and its tributaries.
 The river forms a Vshaped valley, and its channel is eroded

models to help forecast the likely weather conditions in the next few days and weeks.

- 3.2 Why is our weather so changeable?
- In March 2018 a
 blast of bitterly cold
 weather swept
 across the UK and
 Europe from Siberia,
 causing severe
 disruption and many
 deaths. It became
 known as 'The Beast
 from the East'.
- Weather in the UK is very changeable, due mainly to the effect of several air masses that come from different directions.
- Most of the time in the UK, a prevailing wind blows from the south-west across the Atlantic Ocean, bringing mild, cloudy and wet conditions.
- North Atlantic Drift is a warm ocean current that transfers warm water across the Atlantic from the Caribbean and brings warmer weather and rain to

Carnival.

- Today there are many more people from different ethnic groups living in the UK than there were in the past.
- The ethnic diversity of the population varies in different parts of the UK.
 Birmingham is one of the UK's most ethnically diverse cities.
- 4.2 Measuring population.
- The population of the UK is measured by carrying out a census survey once every ten years, when every household completes a questionnaire giving details about everyone who lives there.
- The first UK
 census, in 1841,
 recorded only
 details of people's
 name, age, gender,
 occupation and
 place of birth. Since
 then, the census
 has become much
 more detailed, with

(secondary), care workers (tertiary) and scientists (quaternary).

- 5.2 Changing employment.
- In recent decades, employment in the secondary (manufacturing) sector has declined in the UK, and the tertiary sector (services) has become the most important.
- Manufacturing in the UK declined in the last decades of the twentieth century. Companies began moving their manufacturing to other countries where labour costs were lower and goods could be produced more cheaply.
- The number of visitors to the UK has grown rapidly in recent years, and tourism is one of the UK's fastestgrowing employment sectors.
- 5.3 Communications

- The UK Government is building new homes to make sure that everyone has somewhere to live, and charities help to find shelter and jobs for homeless young people.
- 6.2 Water supplies.
- One household can use as much as 350 litres of water a day.
- The hot, dry summer of 2018 meant many areas of the UK were at risk of water stress, causing crops to die, hosepipe bans, wildfires and an increase in tourism.
- Water supply comes from rain, which is stored in aquifers, reservoirs, lakes and rivers.
- There are benefits and drawbacks to constructing new reservoirs, and there are very different views about this issue.
- 6.3 Waste management.
- Around 50 per cent of household waste is

leave the European Union in 2019.

- 1.4 Exploring the local environment.
- A local environment is a small area, for example a housing estate, a shopping street, a village, a park or a wood.
- OS maps show local environments at different scales. The local environment can also be mapped using mental maps or sketch maps.
- Local environments can be redeveloped to make them more attractive places to live.
- 1.5 Learning about the UK using OS maps.
- OS maps are very detailed maps of Great Britain, available at different scales.
- use and interpret political maps
- 2) label and annotate maps
- 3) understand

- by rocks, becoming wider and deeper before reaching the mouth and flowing into the sea.
- The River Aire is in Yorkshire, and flows from the Pennine Hills to the North Sea. Its tributaries have several large waterfalls. The river has many bends, called meanders, formed by erosion and deposition.
- The floodplain of the River Aire is used for farming and grazing cattle.
- 2.4 Coastal landscapes.
- The coast is shaped by the processes of erosion, transportation and deposition. Rocks are eroded and broken down by waves, and then transported and deposited by the movement of the sea.
- Cliffs are steep, vertical rock faces formed on the coast. Waves erode the cliffs, and the rock is broken down and

the UK, especially the south-west coast.

- 3.3 Rain.
- The water cycle describes how water is constantly being recycled between the atmosphere, the land and the oceans. Rain (precipitation) is an important part of the water cycle, transferring water from the atmosphere to the ground.
- Rain is formed when air cools and condenses, turning water vapour into water droplets (which turn into clouds). As these droplets become larger and heavier, they fall to the ground as rain.
- Short periods of very heavy rainfall can sometimes cause widespread and devastating flooding in the UK.
- 3.4 Urban microclimates.
- Urban microclimates are characterised by higher temperatures, windy conditions,

- more information about individuals and where they live.
- The population data from the UK census helps the government to plan spending on public services, and to develop new policies for things such as transport, housing and healthcare.
- The UK has an ageing population.
 People now live longer, and there is now a higher percentage of older people in the UK than in the past.
 This is likely to increase in the future.
- 4.3 The impacts of migration.
- People come from all over the world to live in the UK.
- There are a number of reasons why people come to live in the UK: to get better jobs and earn more money; to escape wars, natural disasters or

- and transport.
- New technology
 has made
 communication
 much faster. Almost
 all communications
 today are sent
 electronically, using
 modern
 technologies such
 as submarine
 communication
 cables and
 satellites.
- Fibre optic cables, many of them on the seabed, are an important part of the communications between the UK and the rest of the world.
- The new HS2 highspeed railway, linking London with the north of England, is expected to cut journey times and benefit businesses, but there are concerns about the possible impacts on the countryside.
- 5.4 How do we spend our free time?
- Work/life balance is the balance between the time

- disposed of by burying it in the ground (landfill). But two thirds of our waste can be recycled and used for other things.
- As the amount of waste being recycled increases, at times there is too much to process here in the UK. Some waste, especially paper and plastic, is then sent to other countries to be recycled.
- Aluminium drinks cans can be recycled and made into new cans in six weeks.
- The UK is trying to cut down on the amount of waste it produces, by introducing schemes to cut down the use of plastic, glass and metal.
- 6.4 Air pollution.
- Air pollution in the UK is caused by the growing number of cars on the roads, as petrol releases harmful gases into the air. Air pollution can cause serious health problems, such as breathing difficulties and lung disease.

numerical data complete bar charts.

Assessment outcome:

Pre and post topic assessments.

eroded to become pebbles and sand, which are deposited by the movement of the sea to form beaches.

- 2.5 Mountains and glacial landscapes.
- Mountains in the UK are found mainly in the north and west, and especially in Scotland, where the highest mountain in the British Isles, Ben Nevis, is located.
- Mountains are popular with walkers and climbers, but they can be dangerous places and conditions can be challenging.
- Freeze-thaw
 weathering is one of
 the main physical
 processes that
 shape mountain
 landscapes. Water
 continually freezes
 in the cracks in rock,
 making them bigger,
 and eventually
 breaks the rock
 apart.
- During the last Ice Age, much of the UK was covered by ice sheets several

- higher night-time temperatures, and a higher chance of storms, fog and smog.
- Urban microclimates are caused by the heat from buildings, roads, vehicles and industry, and by higher temperatures, pollutants and a lack of vegetation.
- An urban heat island is a concentration of higher temperatures in a city.
- 3.5 Extreme weather in the UK.
- Recent examples of extreme recordbreaking weather in the UK include the hot, dry summer of 2018 and the heavy rainfall in December 2015.
- The village of Glenridding, in the Lake District, suffered devastating floods when heavy rain caused the local river to burst its banks, damaging houses, shops, roads and bridges.

persecution; to study; or to join family or friends.
Many people migrate within the UK, moving from one place to another, mainly for jobs or family reasons, but also for retirement or a better quality of life. The highest net migration is to the south-west of England.

- 4.4 Living in Leicester.
- Leicester was founded by the Romans, and has grown into a large and successful city, due to its location on flat land by a river, with good transport links for trade and industry.
- People are attracted to live in Leicester because of the opportunities it offers for employment, education, recreation and entertainment, and its wide range of services.
- Leicester has an

- we spend working and the time we spend on rest and leisure.
- People now have more free time. The most popular ways of spending leisure time in the UK are watching TV and listening to music, shopping, hobbies and games, eating out and sports activities.
- People in the UK enjoy a wide range of outdoor activities in their leisure time.
- 5.5 The geography of sport.
- Many people in the UK enjoy watching or participating in a wide range of sports activities.
- Parkruns are weekly 5km runs held all over the UK, mainly around local parks, and are open to everyone.
- Football is a global sport, through common rules, TV, advertising, merchandise and social media. The English Premier

• The UK is trying to reduce air pollution by using strategies to cut down on car use, such as encouraging people to buy electric cars, to cycle rather than drive and to share car journeys. Some cities are introducing clean-air zones and charges to drive into city centres, in order to reduce traffic.

6.5 Energy.

- The consumption of energy in the UK has increased rapidly in the last 50 years.
 Most of the UK's energy is produced using non-renewable fossil fuels – coal, oil and natural gas. The UK relies on supplies of these fuels from other countries, and so is not energy secure.
- Non-renewable energy sources, such as coal, oil and natural gas, are finite and cannot be replaced once they have been used up. Renewable energy sources, i.e. solar,
